

Job Title: Junior Machine Learning Engineer

Company: TechNova AI Solutions

Location: Remote

About the Role:

TechNova AI is seeking a highly motivated Junior Machine Learning Engineer to join our core backend team. You will be responsible for developing intelligent systems that automate data extraction and improve our predictive analytics platform. The ideal candidate has a strong foundation in computer science and hands-on experience with Python-based AI workflows.

Key Responsibilities:

- Design, build, and deploy machine learning models for natural language processing (NLP) and computer vision.
- Develop robust data extraction pipelines to process unstructured text and document layouts.
- Collaborate with the frontend and backend engineering teams to integrate AI models into production applications.
- Perform data cleaning, feature engineering, and model evaluation to ensure high accuracy.

Required Skills & Qualifications:

- Bachelor's degree in Computer Science, Information Technology, or a related technical field.
- Strong proficiency in **Python** and object-oriented programming.
- Hands-on experience with data science and machine learning libraries (e.g., **Pandas**, **scikit-learn**, PyTorch, or TensorFlow).
- Familiarity with text processing and NLP techniques.
- Understanding of Git version control and collaborative software development.
- *Bonus:* Previous experience or academic projects involving predictive modeling or computer vision.
